

Ronald Sin . Jarvis Consulting

I am a data engineer graduating from Ontario Tech University with a Bachelor of Science in Computer Science (Co-op). Previously, I worked at Code Ninjas as a black-box tester, where I collaborated with a development team to create 100+ test cases and identify and resolve 50+ bugs in an in-house web application. What draws me to data engineering is my passion for problem-solving, designing pipelines and transforming messy datasets into clean, structured information feels like solving an intricate puzzle, and the satisfaction when everything clicks into place is unmatched.

Skills

Proficient: Python (numPy, sciPy), Linux/Bash, RDBMS/SQL, Agile/Scrum, Git

Competent: Java, JavaScript, C#, DataBricks, Flutter

Familiar: Dart, Unity, HTML, CSS, React

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_RonaldSin

Cluster Monitor [GitHub]: Developed a metrics collection and storage system for Linux cluster monitoring. Leveraged Bash scripts (lscpu, vmstat) to extract, process, and store hardware and usage metrics. Deployed a Dockerized PostgreSQL database for persistent data storage. Streamlined deployment workflows through automated database provisioning and management scripts, reducing setup time. Scheduled automated data collection using Crontab.

Highlighted Projects

Image Filter and Effects App [GitHub]: Developed a Python-based photo editing tool with advanced colour replacement capabilities. Manipulated colour space data using NumPy and SciPy matrix transformations to isolate and replace specific colour ranges within images. Integrated a fuzzy selection feature with adjustable sensitivity thresholds for precise colour targeting. Implemented lossless upscaling algorithms based on mathematical interpolation techniques to preserve image fidelity. Designed an intuitive PySimpleGUI interface to enhance accessibility for non-technical users.

Hospital Staffing Level AI Prediction tool [GitHub]: Led a team of 3 developers in a high-pressure hackathon environment, coordinating task delegation and sprint planning to deliver a Granite AI-powered staffing optimization tool for healthcare settings. Engineered a robust Python data pipeline to validate and standardize input data, ensuring consistency across the system. Implemented advanced prompt engineering techniques to fine-tune Granite AI responses, achieving a 25%+ reduction in average simulated patient wait times.

Professional Experiences

Data Engineer, Jarvis (2026-present): Undergoing training at Jarvis. Completed Linux and SQL modules.

Black Box Tester and Computer Science Instructor, Code Ninjas (2022): Developed over 100 black box test cases and discovering and assisting in fixing over 50 bugs for an in-house booking web-tool. Maintained over 25 computer workstations, contributing to near 100% uptime of facility hardware and software. Individually managed a team of over 20 employees performing coordination, delegating of task and administrative duties. Provided excellent education for students aged 5-15 and professional customer service, consistently receiving positive reviews and maintaining high client retention rates.

Model Maker and Industrial Painter, PCL Graphics (2025): Created luxurious grand display pieces for high value clients in the makeup industry ensuring a near perfect finishes with a high attention to detail. Gathered and discussed project requirements with client facing departments in order to create flexible plans while accounting for cost, deadlines and potential changes in requirements. Quickly identified, suggested and implemented fixes to critical flaws in plans. Worked in a scrum-like environment participating in daily standups, sprint cycles and sprint reviews. Organized and communicated across different departments to coordinate the provision and processing of raw material.

Education

University of Ontario Institute of Technology (Ontario Tech University) (2019-2024), Bachelor of Science, Computer Science Co-op

Miscellaneous

- Band Member - I participate in weekly band practices as a guitarist, jamming and creating covers of various rock and J-rock songs. I'm constantly scouring Facebook Marketplace for deals on new gear and always on the lookout for fresh music. Some of my favorite bands include Broken By The Scream, Midori, and Imperial Circus Dead Decadence.
- Motorcycles - I look forward to nice weather on my days off so I can take my Yamaha R3 out for a ride. The full-body engagement and lack of physical barriers allow me to experience the smells and sights of country roads in ways a car never could.
- Volleyball Player - I'm a casual recreational player who enjoys participating in pickup volleyball matches with friends. I love the fast-paced, team-oriented gameplay where every player must execute their role for the team to succeed. The post-game meals with everyone are always a highlight.
